

Retention Signal AI

Enterprise Account Intelligence Platform

Version: 1.0

Project Type: Enterprise SaaS Platform

Platform: Web Application

Target: Hackathon MVP (Production Quality UI)

IMPORTANT INSTRUCTIONS FOR AI CODING PLATFORM

READ CAREFULLY

This project **MUST NOT** look like an AI-generated website.

It **MUST** look like a real enterprise SaaS product built by an experienced product team.

The application should feel comparable to:

- Stripe Dashboard
- Linear
- Salesforce Lightning
- HubSpot Enterprise
- Attio CRM
- Datadog
- Vercel Dashboard
- Notion
- Clerk Dashboard

DO NOT create:

- Generic cards
- Oversized buttons
- Random gradients
- Cartoon illustrations
- Fancy glassmorphism everywhere
- Landing-page style layouts

Instead create:

- Professional B2B SaaS
- Excellent spacing
- Clean typography

- Enterprise dashboard
- Premium UX
- Realistic charts
- Excellent visual hierarchy
- Highly reusable components

Everything should look like a product already used by Fortune 500 companies.

PRODUCT OVERVIEW

Retention Signal AI is an internal Account Intelligence Platform designed for service companies.

It continuously monitors client health, detects churn risks, identifies upsell opportunities, finds cross-sell opportunities, and assists account managers with AI-powered recommendations.

This is NOT a CRM.

This is an AI-powered decision support platform.

The primary users are:

- Delivery Managers
 - Project Managers
 - Customer Success Managers
 - Account Managers
 - Directors
 - Leadership
-

PRODUCT GOALS

The dashboard should instantly answer:

- Which accounts are healthy?
- Which accounts are at risk?
- Why are they at risk?
- Which accounts can be upsold?
- Which clients need another service?
- What should the account manager do next?
- What requires immediate attention?

Everything should feel proactive rather than reactive.

DESIGN PRINCIPLES

The design should communicate:

Professional

Minimal

Premium

Modern

Data-driven

Enterprise

Intelligent

Fast

Avoid:

Bright random colors

Huge icons

Rounded cartoon UI

Huge empty spaces

Marketing website appearance

Student project design

DASHBOARD PHILOSOPHY

The homepage should NOT be a collection of charts.

It should feel like an AI Operations Center.

When user opens dashboard,

The first thing visible should be

Good Morning, Sai Kiran

Retention Signal AI analyzed 50 accounts overnight.

3 accounts require immediate attention.

7 accounts show early warning signals.

5 upsell opportunities detected.

4 cross-sell opportunities discovered.

Industries

Managers

Services

Trend history

Everything interconnected.

RESPONSIVE REQUIREMENTS

Desktop

Primary target

Tablet

Professional adaptation

Mobile

Stack intelligently

Do NOT simply shrink desktop.

ACCESSIBILITY

High contrast

Keyboard accessible

ARIA labels

Focus states

Professional forms

Readable tables

CODE QUALITY

Use

Next.js (App Router)

TypeScript

Tailwind CSS

shadcn/ui

Framer Motion

Recharts

Lucide React

Component-based architecture

Reusable components

Clean folder structure

No inline styles

No duplicated components

Use mock APIs/data only.

WHAT NOT TO BUILD

Do NOT create

Landing Page

Marketing Website

Hero Section

Pricing Page

Testimonials

Blogs

Authentication Backend

Real APIs

Backend Logic

Only build production-quality UI with realistic mock data.

SUCCESS CRITERIA

The final application should make an experienced SaaS designer believe this is an enterprise product under active development—not an AI-generated demo.
