# FINAL QUALITY REQUIREMENT

The application should look like a **\$50M ARR SaaS platform**, not a hackathon project. Every page should have consistent spacing, reusable components, polished charts, realistic mock data, thoughtful empty/loading/error states, and enterprise-grade navigation. The UI should feel like a product that could be presented to executives and investors.

---

## One Improvement Before Part 3

After reviewing the PDF again, I think we can make the product even stronger by **renaming and restructuring some navigation**.

Instead of a traditional sidebar:

- Dashboard
- Clients
- Reports
- Tasks

I recommend organizing it around **business outcomes**, for example:

- **Command Center**
- **Accounts**
- **Health Intelligence**
- **Growth Intelligence**
- **Work Queue**
- **Insights**
- **Administration**

This subtle change makes the product feel more like an AI operations platform than a CRM. It also aligns much better with the vision described in the PDF and gives the application a distinctive identity during your demo.
