

PART 3 — DESIGN SYSTEM, COMPONENT LIBRARY, UX RULES & AI BUILDER CONSTRAINTS

ENTERPRISE DESIGN PHILOSOPHY

VERY IMPORTANT

This application is **NOT** a landing page.

This application is **NOT** a startup template.

This application is **NOT** a CRUD admin dashboard.

This application is an **Enterprise AI Intelligence Platform**.

The design language should communicate

- Intelligence
- Trust
- Reliability
- Enterprise
- Decision Making
- AI Assistance
- Premium Product

Every screen should look like it belongs to a mature SaaS company.

VISUAL DESIGN PRINCIPLES

Every page should follow

Minimal

Professional

Data First

Readable

Consistent

Accessible

Enterprise Grade

Modern

Do NOT design for aesthetics alone.

Design for executives who use the product every day.

SPACING SYSTEM

Use an 8-point grid system.

Spacing values

4
8
12
16
20
24
32
40
48
64
80
96

Never use random spacing.

Maintain consistent rhythm across the application.

BORDER RADIUS

Buttons

10px

Cards

12px

Inputs

10px

Dialogs

16px

Charts

12px

Tables

8px

Avoid excessive rounding.

SHADOWS

Use subtle elevation only.

Three levels

Small

Medium

Large

No dramatic floating shadows.

COLORS

Only use colors with semantic meaning.

Green = Healthy

Yellow = Watch

Orange = Warning

Red = Critical

Blue = Information

Gray = Neutral

Do not use decorative colors.

TYPOGRAPHY SCALE

Heading 1

32px

Heading 2

28px

Heading 3

24px

Heading 4

20px

Section Title

18px

Body

16px

Caption

14px

Small

12px

Use Inter font throughout.

ICONOGRAPHY

Use Lucide React icons only.

Icons should be

Simple

Minimal

Consistent

Never oversized.

CARD DESIGN

Every card should follow

Header

Description

Main Metric

Trend

Action

Footer

Example

Health Score

82

Healthy

+5%

Compared to last week

[View Details →](#)

Never place random content inside cards.

KPI CARDS

Every KPI card should include

Metric

Label

Mini Chart

Comparison

Time Range

Status

Example

Healthy Accounts

42

↑ 12%

Compared to last month

TABLE DESIGN

Enterprise tables only.

Features

Sticky Header

Sorting

Filtering

Pagination

Resizable Columns

Hover State

Context Menu

Status Badges

Actions

Professional spacing

Avoid cramped rows.

CHART DESIGN

Use Recharts.

Charts required

Line

Area

Bar

Donut

Progress

Gauge

Sparkline

Timeline

All charts must support

Tooltip

Legend

Responsive Layout

Animations

Hover

HEALTH GAUGE COMPONENT

One of the most important components.

Display

Large Circular Gauge

Score

Status

Trend

Color

Recommendation

Example

84

Healthy

↑ 5%

No immediate action required

AI INSIGHT CARD

Premium card

Contains

Title

Summary

Confidence

Reason

Suggested Action

Timestamp

Expand

Copy

Share

Dismiss

Looks similar to ChatGPT answer cards.

RECOMMENDATION CARD

Example

Company

Acme Corp

Issue

Email response time increased 42%

Confidence

92%

Recommended Action

Executive Check-in

Priority

High

SIGNAL TIMELINE

Professional timeline.

Each event contains

Timestamp

Signal Type

Source

Description

Severity

Example

12 Jun

Leadership Change

External

Medium

CEO Changed

KANBAN DESIGN

Cards

Priority

Owner

Due Date

Client

AI Badge

Progress

Drag and Drop

Professional animations.

MULTI STEP FORM

Professional wizard.

Each step

Title

Description

Validation

Progress Indicator

Autosave Indicator

Professional navigation.

EMPTY STATES

Every page needs meaningful empty states.

Example

No recommendations available.

Everything looks healthy today.

Not

"No Data"

LOADING STATES

Never use blank pages.

Skeleton UI

Chart placeholders

Table placeholders

Card placeholders

Progress indicators

ERROR STATES

Professional messaging.

Explain

What happened

What user can do

Retry

Support

SEARCH EXPERIENCE

Global Search

Instant Search

Highlighted Results

Categories

Recent Searches

Keyboard Navigation

CTRL + K

Like Linear.

FILTERS

Slide-over drawer.

Do not clutter tables.

Support

Multiple filters

Saved filters

Reset

Apply

MODALS

Professional dialogs.

Not oversized.

Clear actions.

Escape closes.

Accessible.

TOAST NOTIFICATIONS

Small

Top Right

Auto dismiss

Semantic colors

Icons

NAVIGATION EXPERIENCE

Sidebar always visible on desktop.

Collapsible.

Icons + Labels.

Remember collapsed state.

USER PROFILE

Professional dropdown.

Profile

Workspace

Preferences

Theme

Logout

ANIMATION GUIDELINES

Subtle only.

150–250ms.

Use

Fade

Slide

Scale

Never use

Bounce

Spin

Flash

Exaggerated effects.

RESPONSIVE BEHAVIOR

Desktop

Full experience.

Tablet

Adaptive layout.

Mobile

Stack intelligently.

Do not hide important information.

COMPONENT LIBRARY

Build reusable components for:

- AppShell
- Sidebar
- TopNavbar
- Breadcrumb
- PageHeader
- KPI Card
- Health Gauge
- AI Insight Card
- Recommendation Card
- Client Card
- Client Table
- Weekly Report Wizard
- Signal Timeline
- Notification Item
- Activity Timeline
- Task Card
- Kanban Column
- Donut Chart
- Line Chart
- Bar Chart
- Progress Card
- Stats Card
- Empty State
- Error State
- Skeleton Loader
- Search Bar
- Command Palette
- Filter Drawer
- Confirmation Dialog
- Settings Panel

No duplicated UI code.

MOCK DATA SPECIFICATION

Generate realistic data.

Companies

Use realistic company names.

Examples

Acme Digital

Northgate Media

Pixel Labs

BlueWave

Nova Retail

GrowthX

CloudNest

Vertex Media

Zen Analytics

Orbit Systems

Industries

Advertising

Media

Retail

Healthcare

Finance

EdTech

SaaS

Manufacturing

Technology

Logistics

Managers

Generate

10 realistic managers

Profile photos

Email

Role

Department

Clients

50 Clients

Random health

Random contracts

Random services

Random revenue

Weekly Reports

500 reports

Connected to clients

Trend history

Recommendations

200

AI generated

Random confidence

Priority

Action

Tasks

100

Random owners

Due dates

Status

Priority

ACCESSIBILITY

WCAG compliant.

Proper contrast.

Keyboard navigation.

Visible focus.

Screen reader labels.

Semantic HTML.

IMPLEMENTATION CONSTRAINTS

Use:

- Next.js (App Router)
- TypeScript
- Tailwind CSS
- shadcn/ui
- Recharts
- Framer Motion
- Lucide React

Do **not** implement backend logic.

Use mock JSON data.

Keep data centralized.

Design components for future API integration.

AI CODING PLATFORM CONSTRAINTS

These instructions are critical.

- Do **not** generate a marketing website.
- Do **not** generate placeholder lorem ipsum.
- Do **not** use random dashboard templates.
- Do **not** use cartoon illustrations.
- Do **not** generate fake "AI" styling with glowing effects.
- Do **not** overload pages with gradients.
- Do **not** sacrifice readability for aesthetics.

Instead:

- Build reusable components.
- Maintain consistent spacing.
- Use enterprise-grade typography.
- Make the interface feel calm, focused, and trustworthy.

- Use realistic enterprise mock data throughout.
 - Ensure every page is internally consistent.
-

FUTURE BACKEND READINESS

Although this phase is frontend-only, design every screen assuming it will later connect to:

- n8n Webhooks
- PostgreSQL
- AI Agents
- Gmail API
- Google Calendar API
- CRM APIs
- News API

Every table, chart, and card should be built to consume dynamic data later without redesign.

ACCEPTANCE CHECKLIST

The UI is considered complete only if:

- Every page is implemented.
 - Navigation is fully functional.
 - Responsive layouts work across desktop, tablet, and mobile.
 - Mock data is realistic and interconnected.
 - Components are reusable.
 - Charts are interactive.
 - Loading, empty, and error states exist.
 - Animations are subtle and consistent.
 - The application resembles a production B2B SaaS product rather than a hackathon prototype.
-

FINAL PRODUCT VISION

When someone opens **Retention Signal AI**, they should immediately think:

"This looks like software built by a company that has been shipping enterprise products for years."

Not:

"This was generated by an AI."

The interface should convey confidence, clarity, and professionalism. Every interaction should support the idea that this is an **AI-powered Account Intelligence Platform** designed to help organizations make better customer retention and growth decisions.

One Final Recommendation

Before you upload this PRD to your AI coding platform, combine **Part 1, Part 2, and Part 3** into a single document (Markdown or PDF) and include the original concept PDF as supporting context.

For the highest-quality output, add this instruction at the very top of the document:

Priority Order

1. Build a production-quality enterprise UI first.
2. Focus on design consistency and component reusability.
3. Use mock data only.
4. Do not implement backend or workflows.
5. Every screen must be future-ready for API integration with n8n.
